How are sales changing over time?

Which products contribute most to sales?

Which products contribute the most quantity ?

Which stores generate the most sales?

Which Product Type contribute the most sales?

KPI findings

Total Sales: The business generated ₹698.81K in sales during Jan–Jun 2023.

Total Orders: The business processed approximately 149K orders during the six-month period.

Total Quantity: Approximately 214K items were sold, which is higher than the number of orders.

Average Daily Sales: Average daily sales were approximately ₹3.86K across the analysis period.

Average Order Value: The dashboard reports an average order value of 4.69.

Sales Trend

How are sales changing over time?

A. Sales declined from January to February, then increased continuously from March through June.

The strongest monthly sales were recorded in **June at ₹166.49K**, while February was the lowest at **₹76.15K**.

Business Insight : Sales momentum strengthened substantially after February, with monthly sales increasing for four consecutive months from March through June.

Product Category Sales

Which products contribute most to sales?

A. Coffee is the largest revenue-generating category, contributing approximately 38.6% of total sales.

The business is highly dependent on its core Coffee and Tea categories, which together generate roughly two-thirds of total sales.

Product Quantity

Which products contribute the most quantity?

A. Coffee has the highest sales volume at approximately 89K items, followed by Tea at approximately 70K.

Store Sales

Which stores generate the most sales?

Hell's Kitchen generated the highest sales at ₹237K, followed by Astoria at ₹232K and Lower Manhattan at ₹230K.

Sales are relatively evenly distributed across the three stores; there is no single store dominating overall revenue.

Which stores generate the most sales?

How does each store perform over time?

Which store generates higher-value orders?

What does each store sell?

store_location	Bakery	Branded	Coffee	Coffee beans	Drinking Chocolate	Flavours
Astoria	₹26,599.75	₹5,457.00	₹89,744.30	₹10,219.20	₹26,335.25	₹1,764.8
Hell's Kitchen	₹27,386.95	₹1,942.00	₹91,222.65	₹18,635.10	₹23,586.25	₹2,876.8
Lower Manhattan	₹28,328.94	₹6,208.00	₹88,985.50	₹11,230.95	₹22,494.50	₹3,767.2
Total	₹82,315.64	₹13,607.00	₹269,952.45	₹40,085.25	₹72,416.00	₹8,408.8

Store Performance

Store Sales

Which store generates the most sales?

Hell's Kitchen generated the highest sales at approximately ₹236.51K, followed by:
Astoria — ₹232.24K
Lower Manhattan — ₹230.06K

Business Finding: Hell's Kitchen recorded the highest total sales among the three stores, while Lower Manhattan recorded the lowest. However, the sales gap between the stores is relatively narrow.

Is sales performance improving or declining?

Month	Sales MoM
February	-6.77%
March	+29.80%
April	+20.34%
May	+31.77%
June	+6.23%

Sales declined in February 2023 but recovered strongly from March onward. May recorded the highest MoM growth at 31.77%, while growth moderated to 6.23% in June.

Higher-value orders

Finding: Lower Manhattan has the highest displayed average order value, followed by Hell's Kitchen and Astoria.

Business Insight: Lower Manhattan has the highest average order value among the three stores, although the store-level differences are relatively narrow.

What does each store tell ?

Finding: Coffee is the largest sales-generating category, contributing approximately ₹270K across all stores. Within the category, Barista Espresso and Gourmet Brewed Coffee are the strongest contributors, together generating approximately ₹161.4K.

Tea Category Analysis

Within the Tea category, Brewed Chai Tea is the leading product by sales, making it an important contributor to Tea-category performance.

Do high-volume products also generate high sales?

Which categories drive sales?

Which product types drive sales?

Which products sell the most quantity?

Product Performance

Top Products by Quantity

Finding: The top products by quantity are **quite closely clustered**, with the leading products selling around **4.5K–4.7K units**.

Business Insight: Product demand is distributed across multiple products rather than being concentrated in one overwhelmingly dominant SKU.

Category Sales

Finding: Coffee and Tea remain the two dominant revenue categories.

Business Insight: The product analysis confirms the overall dashboard finding that beverage categories, particularly Coffee and Tea, are the primary revenue drivers.

Sales vs Quantity Scatter Plot

Finding : Some products generate relatively high sales volume without being among the highest-revenue products, indicating that sales volume and revenue contribution are not necessarily equivalent.

Top Products by Sales

Finding: The top individual products generate between approximately **₹15K and ₹21K** each. No single product is generating anything close to the entire category's revenue.

Business insight: Revenue is distributed among several individual products, reducing reliance on one specific SKU while still showing clear high-performing products.

Product Type

Barista Espresso ₹91K
Brewed Chai
Tea ₹77K
Hot Chocolate ₹72K
Gourmet Brewed Coffee ₹70K...

Finding: The leading product types are primarily beverage products.

Business insight : Beverage-based product types account for most of the leading positions in the product-type sales ranking.

Does the business generate more sales during weekdays or weekends?

Which days generate the most sales?

What are the peak sales hours?

How is sales performance changing over time?

Monthly Performance Table

Finding: February was the only month with negative month-over-month sales growth: **-6.77%**
After February, sales increased every month through June.
Strongest finding: May recorded the largest MoM increase: **31.77%**
June then reached the highest absolute monthly sales: **₹166.49K**
Business insight: The business experienced a strong recovery after the February decline, with sales reaching their highest monthly level in June.

Weekday vs Weekend

Does the business generate more sales during weekdays or weekends?
Finding: Weekdays generated substantially more sales than weekends.
Period Sales
Weekdays ₹504K
Weekends ₹195K
Business insight:
The majority of sales occur during weekdays, indicating that the business has a stronger weekday sales pattern than weekend sales pattern.

Business Investigation:

Day-of-Week Sales

Which days generate the most sales?
Finding: Monday recorded the highest sales at approximately ₹102K.
Saturday recorded the lowest at approximately ₹97K.
Important observation
The difference between the highest and lowest day is only around ₹5K.
Business Insight: Sales are relatively consistent across days of the week, with Monday slightly higher and Saturday slightly

Peak Sales Hours

What are the peak sales hours?
Sales peak around **8 AM–10 AM**, with **10 AM** recording the highest sales at approximately **₹66K**. Sales decline after the morning peak, reaching their lowest level around **8 PM**.

Business Investigation

Why did sales increase sharply after February?

Sales increased sharply after February primarily because transaction volume and quantity sold increased substantially. Monthly sales rose from ₹76.15K in February to ₹166.49K in June, while orders increased from 16,359 to 35,352 and quantity increased from 23,550 to 50,942. This indicates that the growth was driven mainly by higher sales volume rather than a major increase in average order value.

Why is Astoria generating the lowest sales?

Astoria recorded the lowest total sales among the three stores. The lower sales level is associated with lower order volume and lower Average Order Value compared with the other store locations. Further analysis of product mix and hourly sales is required to determine whether differences in customer demand, product mix, or trading hours contribute to the gap.

Are high-value products underperforming?

Coffee and Tea are major sales-generating categories and both recorded positive MoM growth. Coffee generated approximately ₹91.2K with 31.81% MoM growth, while Tea generated approximately ₹64.7K with 30.75% growth. Therefore, the available figures indicate positive momentum rather than category-level decline.

What are the peak sales hours?

Sales are concentrated in the morning, with the strongest performance occurring between approximately 8 AM and 10 AM. 10 AM is the peak sales hour at approximately ₹66K. Sales decline considerably during the later hours, reaching approximately ₹2.9K at 8 PM. Sales at 7 PM were approximately ₹28.4K and declined further to

Which products sell during peak hours?

During the peak morning period, multiple product categories contribute to sales, with Coffee and Tea generating the largest sales contribution. During the peak-hour period, Coffee generated approximately ₹33.3K and Tea approximately ₹23.0K, making them the strongest contributors among the analyzed categories.

Which stores have strongest morning sales?

The 7 AM–10 AM period represents the strongest morning sales window. Store-level performance during this period should be compared to identify which location contributes most to morning demand.

Why are weekday sales much higher than weekend sales?

Weekday = ₹504K
Weekend = ₹195K
Customers spend much more on weekdays.

Weekdays generate ₹504K versus ₹195K on weekends, but the difference is largely influenced by the number of weekdays versus weekend days. On a daily basis, weekday sales are approximately ₹100.8K compared with ₹97.5K on weekends, indicating that daily sales are relatively similar, with only a modest weekday advantage.

Peak-Hour Opportunity

Finding: Morning hours represent the strongest sales period, with sales peaking at 10 AM. Coffee and Tea are the dominant categories during this period. Sales decline substantially toward the evening, reaching the lowest level at 8 PM.

Business interpretation: The morning sales concentration indicates that peak-hour product availability and operational capacity could be important factors for maximizing sales during high-demand periods.

Why is a product underperforming?

Dark Chocolate records relatively low sales alongside lower order volume and quantity compared with stronger-performing products. This suggests limited contribution to overall sales, but additional analysis of store availability and product demand is required before concluding that the product itself is unpopular.

Revenue Concentration

The top 10 products contribute approximately 79% of total sales, indicating a high concentration of revenue among a relatively small group of products.

Business implication:
The business may be significantly dependent on its leading products, making their availability and continued demand important to overall sales performance.

Key Business Insights

01 — Sales Recovery

Sales declined **6.77% in February** but returned to positive MoM growth from March onward, with the strongest growth of **31.77% in May**.

02 — Stable AOV

AOV remained within a narrow range of **₹4.65–₹4.72**, suggesting that sales changes were more closely associated with order activity than major changes in average order value.

03 — Product Concentration

Top 10 Product Types contribute approximately **79%** of total sales.

04 — Category Drivers

Coffee and Tea are the dominant sales categories across the stores. Barista Espresso is the leading individual product by sales.

05 — Store Performance

Hell's Kitchen generated the highest sales at approximately **₹236.51K**, while Lower Manhattan recorded approximately **₹230.06K**.

06 — Morning Demand

Sales are strongest around **8–10 AM**, with **10 AM reaching approximately ₹66K**, while sales fall sharply toward the evening.

07 — Evening Decline

Sales decrease from approximately **₹28.4K at 7 PM to ₹2.9K at 8 PM**, indicating a substantial drop in late-evening demand.

08 — Product/Volume Relationship

Sales volume and revenue should be evaluated separately because high quantities do not necessarily indicate proportionally high sales revenue.

Recommendation 1

Monitor inventory availability for high-contributing Coffee and Tea product types during peak morning hours.

Recommendation 2

Analyze product-level demand and availability for lower-performing products before making assortment changes.

Recommendation 3

Use monthly sales and product-type performance as recurring KPIs to monitor whether the post-February growth trend continues.

Recommendation 4

Compare store-level hourly sales to determine whether peak-hour patterns differ by location before making store-specific operational decisions.
